Gaurav Misra

Director, Software Engineering @ Yahoo
October 27, 2018, Sumith worked with Gaurav in the same group

Sumith joined Yahoo, Bangalore from Misys, Bangalore. He was part of my Product Team - Y! Cloud. In his extremely short stint at Yahoo, I found Sumith to be effective with Core Java, Spring and Java EE. He is Proactive and a Team Player. As per the information available to me, he left Yahoo to pursue an opportunity that would place him in London (United Kingdom). I wish him all the luck in his endeavors.

Jagan Nathan Vaman

Principal and Solution Leader Cyber Security at Tech Mahindra
September 30, 2018, Jagan Nathan was Senior to Sumith But Didn't Manage Directly

Sumith was the Senior (Java) Technical Architect (Contract) for the Re-Engineering and Re-Architecting Effort for Provian, using the newly chosen Technical Stack (Java and Java EE), as per our changing business needs. Provian is the Flagship Product of Paladion, in the area of Information Security (Threat or Vulnerabilty Detection and Management). In my short association with him, I found him to be Highly Resourceful, Innovative and Highly Skilled in Java / Java EE. As per my knowledge, he had single-handedly Understood the Requirements, Worked on the Design and Developed/Delivered the Initial Prototype (Fairly Good Size Codebase for a Prototype) for Rules Engine, Complex Event Processing, Infrastructure, Data Loader and Threat Event Detection. The technologies utilized were Drools Fusion, Drools Expert, Esper CEP, Core Java, Java EE and Wildfly. He had also created the Knowledge Sharing Videos of the above Prototype, to help the entire team that was to later continue working on the Actual Product Development. As per the information available to me, at the end of this short term with Paladion – Sumith joined Persistent Systems in Bangalore. Sumith is a Go-Getter, Team Player and has Effective Communication Skills. I wish him the Best of Luck for all his Future Endeavours.

KNM Rao

Founder & CEO (Quick Ride)
November 29, 2017, KNM Managed Sumith Directly

Sumith joined Huawei, Bangalore in about May 2006. I had hired him for my Product Development Team, iSAP Workflow (Server Side) Team as a Senior Software Engineer. Sumith is effective with Core Java and Java EE. He worked on various Code Re-Engineering/Refactoring activities in iSAP Workflow. He also designed and implemented a Callback API as part of his assignment(s). He had also worked on Code Coverage, Bug Fixes, Code Formatting and Javadoc Comments. The iSAP Workflow (Server Side) can be categorized as a Large to Very Large Codebase. Sumith was able to understand this and fix defects, in a fairly short time. I am aware that he had secured admission for the MS [CSE] Program at each of University at Buffalo, New York; University of Central Florida, Gainesville; University of Texas, Dallas and New York University, Brooklyn for the Fall 2006 Session. He had decided to join MS [CSE] at the University at Buffalo, New York deferring his admission to Spring 2007. He left Huawei, Bangalore to join Symantec, Pune. I wish him success and luck in his Career/Ventures

Varghese Daniel

Agile Practioner, Project Management Consultant, Data Analytics, Six Sigma
November 3, 2017, Varghese Managed Sumith Directly

Sumith had joined this project as a Fresher, in ~July 2003, after clearing the Infosys Recruitment Process. Sumith was in the API Development Team of the Global Reference Information Project (Version 2.0 & Later 2.1) of Shared Data Services Suite. He Developed the User Interface/Screen Prototypes, Java EE Presentation Layer and was involved in Integrating with Java EE Service Layer (Facility and Capability Business Entity/Modules) using Core Java 1.4, Java EE 1.4, Struts 1.1, JSP 2.0, EJB 2.1, Weblogic 6.1, Windows, UNIX. He was involved in documenting the System Test Plan and in various design and technical discussions. Sumith is a Team Player, Proactive and Technically Motivated.

Gaurav Sahu

Apps Engineer at Wells Fargo
November 2, 2017, Sumith was Senior to Gaurav, But Didn't Manage Directly

My association with Sumith was in his position as Architect of TradeBeam. One of the main assignments during this tenure was a Medium to High Complexity Custom (Client) Development Assignment. Sumith understood the Customer Requirements, Prototyped the Usage (Screen) Flow and helped the entire Team (Aptean Research and Development Team, Customer Stakeholders) correctly fine-tune and close the Requirements. He was the primary responsible for sign-off of the Requirements and High-Level Design. He helped us during the Prototyping and Development for each of Apache CXF/JiBX based Web Services Layer and the Core Java, Oracle 12c based Data Loader. He also Developed almost the entire Infrastructure Layer, Search Layer, Services Layer, Persistence Layer using Apache Lucene, Hibernate Search (5.5), Weblogic 12c, Oracle 12c, Core Java (8.0) and Java EE (6.0). Being a member of the team, I am aware that he played a major part in Agile Planning, Hardware Sizing and also in Co-ordinating with the System, Security and Performance Testing for this Assignment. This Software System did Go Live (UAT) as per the Plan and has also gone into its next version, as well. He is impactful within and outside the Organization in Technical Activities across Dimensions - I am aware that he had numerous articles published in Leading Developer Magazines on various topics in Core Java, Software Design and Java EE. I was part of the team that he led in a Reputed Corporate Hackathon (Qualified as Finalist), where we participated in the Artificial Intelligence Theme. He also wore the hat of a Java / Java EE Trainer at the Project Level, imparting Training on Core Java and Hibernate to the entire Project Team of about 12. He also continued this activity to Test Setting and Evaluation of the Entire Team. He allowed and encouraged Team Participation during Meetings and Discussions. He was also enthusiastic and took lead in various Sports Activities and in Planning Project Outings. I was able to learn a lot from him, during this tenure. I wish Sumith all the luck in this world for his future.

Arvind Pandey
Project Implementation
November 2, 2017, Sumith was Senior to Arvind, But Didn't Manage Directly

Sumith Puri was the Software Development Architect of TradeBeam Suite. One of the Primary Project during this time was a Custom (Client) Development Assignment. He took the lead and was instrumental in the sign-off of Requirement Analysis, High Level Design, Prototyping, System Testing, Performance Testing and the Final Development Deliverable. He is a Team Player and has Effective Communication Skills to convey ideas to both Business and Technical Audience. He was also adept at Database Development, could understand Complex Product Database Design and Developed SQL and PL/SQL Data Extraction Scripts for two major Customers of the Product. He was involved in Java and Java EE Technical Stack Upgrade of the Product and also in (Reference Implementation) Prototyping for Porting of a Major Feature across the Products in the Suite. He was very active Technically (Both Internally and Externally) and also took Technical Training Sessions for the Product Team. I wish him the very best for his future endeavors.
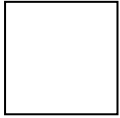

Sidharth Gera
Freelancer Graphic Designer
November 1, 2017, Sumith was a Client of Sidharth's

Working with Mr. Sumith Puri for his Startup's Logo Designing Requirements was a whole new and learning experience. He was highly enthusiastic about his Startup(s) and had great Branding and Marketing Ideas for his Software Products and Startup(s). I converted these Ideas to Implementation like Logo Design, Images and Animation. As an Entrepreneur, he always values Professional Ethics and Legalities. He creates a comfortable environment to work as a Team. He has an eye for detail and wanted only the best for his company which helped me, as well, in adding a new gem to my portfolio. I wish Mr. Sumith Puri all the luck and success for his new venture(s).

Biraja Mahapatra

Sr. Software Consultant at SVAM International
September 29, 2008, Sumith worked with Biraja in the Same Group

Sumith is fast paced at picking up anything that's thrown at him. Same goes with his ability to pickup and learn new technologies and completing in a given time frame. He is fun loving and creates a very comfortable platform in working with his collegues. Sumith has very good indepth knowledge of Java, J2EE and related technologies. I firmly believe that, he could be valuable asset in any team.
